SUMMARY

Third-year Artificial Intelligence undergraduate at UTM (CGPA 3.92, Dean's List for 4 semesters) seeking an AI/ML internship. Curious, eager to learn, and driven by building practical solutions, with a strong interest in exploring new technologies and turning ideas into working systems. Enjoys working across AI, software, robotics, and embedded hardware. Builds RAG, computer-vision and automation systems in Python with Vertex AI, Gemini, n8n, OpenCV and YOLO, and robotics. Won 1st place among 30 teams at the SEDIA Hackathon and shares what I learn by teaching robotics to students at 8 schools.

EDUCATION

Universiti Teknologi Malaysia (UTM), Kuala Lumpur 2024 – Present
Bachelor of Artificial Intelligence

- CGPA 3.92 / 4.00; Dean's List for 4 semesters.

TECHNICAL SKILLS

AI / ML: Machine Learning, Computer Vision (OpenCV, YOLO object detection), Generative AI, Retrieval-Augmented Generation (RAG), AI-based detection on Raspberry Pi
AI Tools & Platforms: Google Vertex AI, Gemini, Antigravity, n8n workflow automation
Languages: Python, C/C++, Java (basic)
Data & Backend: Supabase, Firebase, Power BI, Docker
Embedded & Hardware: Raspberry Pi 3 / 5, ESP32-S3, Arduino, micro:bit

PROJECTS

MediProof – Health Misinformation Verifier *1st Place, SEDIA Hackathon*
MMU × Google Developer Group | 30 teams | 48 hours

- Built one verification system with three touchpoints so users can check health claims where they already are: a website, a browser extension and a Telegram bot.
- Website: users paste a text claim, upload a file or image, record audio, or check a product. Extension: highlight a claim on YouTube, Reddit or social media and verify it without leaving the page. Telegram bot: forward a message, send a voice note, a product-label photo or a YouTube link.
- Developed the frontend and the n8n backend workflows, and presented the technical architecture in the final pitch.

Spenzer – Autonomous Eldercare Companion Robot *UTM ASCEND 2030*
Prototype | Raspberry Pi 3, ESP32-S3, YOLO-Tiny

- Built a prototype companion robot for elderly care whose main function is to make sure elderly users take the pills they are supposed to take.
- Used a YOLO-Tiny object-detection model for the pill dispenser, with a Raspberry Pi 3 handling vision and an ESP32-S3 handling motor and hardware control.

HydroGuard – Water Leakage & Drought Prediction

- Built an app that predicts water leakage and forecasts how long a water drought will last in a given area.
- Added a real-time dashboard for pressure and flow data to help identify pipeline anomalies.

Sovereign Padi Guardian – AI Precision Agriculture github.com/kanesh0506/padi-pro-web
Hackathon prototype | Python, Gemini, Google Vertex AI, RAG, Open-Meteo, SoilGrids

- Developed a RAG-based assistant that gives Malaysian smallholder farmers fertiliser and pest-control recommendations.
- Retrieves past farm data, user behaviour and local authority plantation data, and combines it with weather (Open-Meteo) and soil (SoilGrids) data.

EXPERIENCE & LEADERSHIP

Head of Robotics, Puthiya Manitha 1.0 & 2.0 2025 – 2026

Persatuan Mahasiswa Hindu UTMKL

- Led a 5-member team across two programmes, delivering Arduino, Python and C++ robotics workshops at 8 schools.
- Planned sessions and technical preparation, then guided students through STEM and robotics problem-solving. Students were excited to explore robotics further.

Robotics Team Member, Mirai Robotics UTMKL Jul 2026

- Taught Arduino, Raspberry Pi 5 and micro:bit to 45 students at SMK Sungai Kertas.
- Prepared hands-on demonstrations for a programme monitored by the Menteri Besar Selangor.

Head of Logistics, UTM Artificial Intelligence Club Apr 2025 – Present

- Ran logistics for Data Science 101, a workshop for 60 university students, covering venue, equipment and participant operations.

Programme Secretary, STEM Stars Ambassadors (SP Setia) Sep 2026

- Coordinated hands-on STEM activities for school students; the team placed 3rd at state level.

AWARDS & ACHIEVEMENTS

- **1st Place**, SEDIA Hackathon (MMU × Google Developer Group), 30 teams, 48 hours
- **3rd Place**, STEM Stars Ambassadors, state level (SP Setia), Sep 2026
- **Dean's List**, 4 semesters, UTM (CGPA 3.92)

CERTIFICATIONS

- **Google AI Professional Certificate** – Grow with Google
- **Machine Learning Specialization** – Stanford / DeepLearning.AI (Coursera)
- **Gemini Nexus: The Agentverse** – Google Developer Group
